

**Avila University Institutional Review Board
Request for Research with Human Participants**

Directions for completing this form:

- See the IRB Information Sheet (available on MyAU) for details about how to complete and submit this application.

Principal Investigator Information

Name of Principal Investigator: Jasmine Beltran

Email Address: beltran499789@avila.edu

Phone Number(s): Cell/Home: 816-715-1067 Work: _____

Project/Research Information:

Project Title: Individual Differences in Fundamental Social Motives: A Replication

Project Status:

- ☒ New Project
☐ Modification of Previously Approved Project.

Title of Previous Project _____

IRB number of Previous Project _____

For modifications of approved projects, please describe only those aspects that have changed, in the box below. If applicable, attach additional/modified instrument(s) and/or consent form. Then proceed to signature page.

Project/Research Start Date: February 5, 2024

Project/Research End Date: December 31, 2027

Where will the project be conducted? Avila University and online

Check one of the following and complete the portions noted.

- ☒ Avila University Student—complete part A and go on to the next section
☐ Avila University Faculty/Staff—complete part B and go on to the next section
☐ Investigator not connected with Avila using Avila students, faculty, or staff to collect research data—skip Parts A & B and go to the next section

Part A: To be completed by Avila University student applicants

Student Classification (check one)

1. ☒ Undergraduate Student
☐ Graduate Student
☐ Other: _____
2. Type of project (check all that apply)
☐ Class Project or assignment:
Course Number and Title: _____

- ☐ Independent Research
☒ Thesis Research
☐ Other: _____

3. Name of Faculty Supervisor: Jordan Wagge

Part B: To be completed by Avila University faculty or staff applicants

1. Department: _____
2. Type of project (check all that apply)
- ☐ Personal research project
☐ Thesis/Dissertation Research: Name of affiliated institution _____
☐ Department or College/School Research
☐ Institution-wide Research
☐ Class Project for which you are instructor:
 Course Number and Title: _____
☐ Check if you are requesting Standing Approval

Answer ALL of the following questions.

1. Approximate number of participants to be involved in the research: 200
2. **Abstract describing Project and Purpose.** Briefly describe (a) the project or study and (b) what human participants will experience during the proposed study or project. Indicate what data, measures, or observations will be collected and used in the study or for the project. If any questionnaires, tests, or other instruments are to be used, include a brief description and attach a copy of the instruments.

Science today is facing scrutiny due to its low reproducibility. In the field of psychology alone, only about a third of highly cited successfully replicates. To address this issue, initiatives like the Open Science Framework (OSF) and Collaborative Replication and Education Project (CREP) employ open science practices, making research and replication more accessible. The present study is a CREP project attempting to replicate Neel et al.'s (2016) study on Individual Differences in Fundamental Social Motives. While previous research has primarily focused on motivation as a lens for studying individual differences, the fundamental social motives framework offers a biological perspective, differentiating individual differences by examining the associations between personality traits, life history variables, and these motives. This study will incorporate Rotter's Locus of Control Scale to determine whether an individual's perceived control over attaining these social motivations is a significant predictor. Socioeconomic status will also be assimilated into life history variables to examine whether it is a significant predictor of fundamental social motives. The anticipated results include significant predictions for individual differences in fundamental social motives and locus of control within these motives. Socioeconomic status is expected to emerge as a life history variable predicting individual differences in fundamental social motives. Overall, the present study aims to validate the Fundamental Social Motives Inventory and demonstrate the framework's effectiveness in using these motives as predictors for individual differences.

3. Does the research involve any of the following? Check Yes or No. If Yes, provide an explanation in the space provided below the item.

a. Access to participants through a cooperating institution or agency? ☐ Yes ☒ No
(A letter of cooperation from the agency or persons at the institution must be attached.)

b. Incentives offered for participation (e.g., money, extra credit for the class)? ☒ Yes ☐ No
Participants may receive course credit or extra credit for participating in the research.

c. Participants who could be judged to have limited freedom of consent (e.g., minors, developmentally delayed persons, or those institutionalized)? ☐ Yes ☒ No
(A consent form signed by a parent or guardian is required.)

d. Personal contact that could result in the identification of the participant? ☐ Yes ☒ No
(A consent form is required.)

e. Substances applied externally to the participants? ☐ Yes ☒ No
(A consent form is required.)

f. Procedures involving bodily manipulation? ☐ Yes ☒ No
(A consent form is required.)

g. Deceiving participants about the purpose of the research? ☐ Yes ☒ No
(Debriefing is required.)

h. Specimens? ☐ Yes ☒ No (biological risk addendum may be required)

i. Ingestion of substances? ☐ Yes ☒ No
(A consent form is required; biological risk addendum may be required)

j. Fluid or tissues removed from participants? ☐ Yes ☒ No
(A consent form is required; biological risk addendum must be completed)

4. Will the participants be asked to respond to any of the following areas of “sensitive” research (as defined by Public Health Service Act 301(d))? **Check all that apply.** Explanations and justifications should be included in questions 6 – 12 below.

- ☒ Relating to sexual attitudes, preferences, or practices.
- ☐ Relating to the use of alcohol, drugs, or other addictive products.
- ☐ Pertaining to illegal conduct.
- ☐ Information that, if released, could reasonably be damaging to an individual’s financial standing, employability, or reputation within the community.
- ☐ Information that would normally be recorded in a patient’s medical record, and the disclosure of which could reasonably lead to social stigmatization or discrimination.
- ☐ Information pertaining to an individual’s psychological well-being or mental health.
- ☒ Information in any other category that might be considered sensitive because of specific cultural or other factors.

5. Will the research use any of the following methodologies? **Check all that apply.**

- ☐ Repeated administrations of the same instrument or data collected over several contacts with participants
- ☒ Individual (in person) administration or contact with participants
- ☒ Group (in person) administration or contact with participants
- ☒ Other distribution and collection involving no personal contact with participants (including mail distribution, distribution through another person or agency, etc.)
- ☒ Written consent form for participants to sign
- ☐ Interviews
- ☐ Observations
- ☒ Surveys or questionnaires
- ☐ Audio or video recordings
- ☐ Usage of pictures or images of actual people (*permission required to be attached*)
Materials from websites (*permission required to be attached or source cited, as appropriate*)
- ☐ Copyrighted materials (*permission required to be attached or source cited, as appropriate*)

6. Describe the proposed participants. Include any special considerations such as age, gender, ethnicities, socio-economic status, etc.

The proposed participants of this study will be Avila University students over the age of 18, and snowball sampled social media contacts of lab researchers.

7. Describe how the participants will be identified and recruited for participation in the project. (Note that if an investigator is interested in recruiting students in a specific course, the instructor for that course may allow the investigator to address the students or the instructor may provide the students with the investigator’s information, but may not provide student information to the investigator, without the students’ informed consent.)

Participants will be recruited through social media and on campus through general psychology participant pool. We may also ask other instructors if they would be willing to recruit participants in their class to take the survey during class time, in exchange for a brief discussion of any of the survey constructs (e.g., kin care) following the conclusion of the survey. The instructor would not be in the room while the students took the survey so would not be aware who took the survey and who didn't.

8. Describe the benefits of this research project to participants, and with regard to gains in knowledge or other larger benefits that may result from the project. Note that incentives to participate are not considered benefits of the research.

There are no known benefits to participants, but we hope to learn more about whether the original effect replicates and if so, under what conditions.

9. Describe the risks of this research project. Include all known and anticipated risks to the participants such as side effects, risks of placebo (inert) treatments, etc. Any procedures that might place the participants at risk (psychological, physical, social, or economic) require a consent form. For research that proposes substantial risk to human participants, describe emergency backup procedures that are in place, such as medical or counseling interventions.

We anticipate no greater risk than that of what participants would experience in everyday life.

10. How will you store data and assure continued confidentiality of data collected from this project?

Data will be stored on ScoSci Survey servers and in our lab Google Drive. Names will not be associated with answers. It will remain anonymous.

11. When and to what group(s) will the results be reported?

Results will be posted on the Open Science Framework, at a conference, or in a peer-reviewed publication.

12. Describe **how** you will inform participants of all of the following: (a) the purpose and benefits of the research, (b) the risks of the research, (c) assurances of confidentiality of responses, (d) voluntary participation, and (e) how and to whom results will be disseminated. If using a Consent Form, please attach the form. If not using a Consent Form, provide the statements to be read or provided to the participants.

Participants will be informed of this in the Informed Consent. Please see attached.

CERTIFICATION by Principal Investigator:

By submitting this application, I am certifying that I have read, understand, and will comply with the policies and procedures of Avila University regarding human participants in research. I agree that I will notify and receive approval from the Avila University Institutional Review Board before any non-trivial changes are made to the project described in this request. I certify that all information submitted is accurate. My electronic submission of this form signifies my certification of this information.

Date

CERTIFICATION by Faculty Supervisor (required for student projects only):

By submitting this application, I accept responsibility for assuring that procedures and materials follow the proposal as approved by the Institutional Review Board. Any awareness of violations will be reported to the Institutional Review Board. My electronic submission of this form signifies my certification of this information.

Jordan R. Wagge
